

# BLUE CAREERS: FINDING YOUR PLACE IN THE BLUE ECONOMY

17th August, 2026

## A growing economy, but an unclear career path

As the blue economy rapidly expands through investments in sustainable fisheries, renewable energy, maritime transport, coastal resilience, ocean conservation and marine technology, many students, graduates and early-career professionals are still asking one critical question: **Where do I fit?**

Career information is often scattered across sectors and countries, job titles are unfamiliar, and the link between academic programmes and real employment opportunities is not always clear. This career confusion can prevent young people from pursuing opportunities in a sector where their skills are urgently needed.

Today, we spotlight Blue-jobs' recently released guide to "Starting a Career in the Blue Economy: 2026 Edition", which explains career pathways, labour-market trends, employer expectations and practical steps for entering the blue economy sector.

## Where could your blue career take you?

### 1. Sustainable Fisheries & Aquaculture

- Marine biologist
- Fisheries scientist
- Aquaculture manager
- Feed technologist

### 2. Renewable Energy:

- Offshore wind technician
- Environmental impact assessment specialist

### 3. Maritime Transport & Ports:

- Naval architect
- Port manager
- Marine engineer
- Logistics coordinator

### 4. Coastal Resilience & Adaptability:

- Coastal Engineer
- Climate-risk analyst
- Flood-risk analyst
- Mangrove and wetland restoration specialist

### 5. Ocean Conservation & Management:

- Marine conservationist
- Coastal resources manager
- MPA manager
- Environmental lawyer

### 6. Marine Technology & Engineering:

- ROV pilot
- Underwater robotics engineer
- Oceanographic technician
- Software developer

### 7. Blue Biotechnology:

- Molecular biologist
- Marine pharmaceutical researcher
- Seaweed cultivation specialist
- Laboratory technologist
- Marine geneticist

### 8. Coastal Tourism & Recreation:

- Marine Tourism Manager
- Sustainable Development Specialist
- Dive Instructor

### 9. Ocean Data & Observation:

- Oceanographer
- Data Scientist
- Satellite Data Analyst

### 10. Marine Governance & Law:

- Law of the Sea specialist
- Military lawyer
- Policy analyst
- International relations expert

## What are employees looking for?

Technical qualifications matter, but green, digital, and interpersonal skills are sought

Green Skills: Sustainability, climate adaptation, ecosystem management.

Digital Skills: Data analysis, GIS, programming, modelling, data visualisation.

Interpersonal Skills: Communication, teamwork, problem-solving, adaptability, stakeholder engagement, and project management.

## Start finding your place

Your blue career may be closer than you think! Explore the possibilities, develop your skills and take the first step.

Begin by identifying the ocean or coastal problem you want to help solve. Match that interest with your existing strengths, explore possible job profiles, and identify the additional experience or skills you need.

Internships, volunteering, mentorship, short courses, professional networks and practical projects can all help turn academic knowledge into career opportunities.
