

(Part 1 of a 5-part series)

THE FISHERIES SECTOR: FROM CATCH TO CONSUMER

Exploring Opportunities Across the Fisheries Value Chain

Fish does not move directly from water to plate. It goes through a sequence of activities, people, and businesses - referred to as the fisheries value chain, to reach the final consumer. The value chain comprises of a network of people and businesses involved in supplying input, harvesting, processing, transporting, marketing and delivering fish to consumers. Each stage offers opportunities to build careers, create businesses and improve the sustainability of the sector.

In this segment of our 5-part series, we explore the pre-harvest stage.

1

Where the Value Chain Begins - Pre-Harvest

The fisheries value chain begins long before a fisher launches a canoe or a fish farmer stocks a pond. The pre-harvest stage involves activities done before catching or farming fish. These include a wide range of inputs, equipment and professional services spanning boats, engines, fishing gear, cages, tanks, fish feed, fingerlings, ice, protective clothing, finance, insurance, technical advice, data and digital services.

Business Opportunities to Explore

Fish-feed production & distribution

Fishing-gear production and repair

Ice, cold-storage & preservation services

Boat building & engineering services

Hatchery and fingerlings production

Fisheries finance and insurance

Digital information & market platforms

Technical training & advisory services

Possible Career Pathways

Aquaculture technician

Water-quality analyst

Cold-chain technician

Fish-feed specialist

Net-making and repair technician

Fisheries business adviser

Marine mechanic

Fisheries extension officer

Digital solutions developer

Hatchery manager

Fisheries finance specialist

Fisheries insurance officer

Boat builder

These opportunities can be accessed through university education, technical and vocational training, apprenticeships, short courses or practical business experience.
