

THE FISHERIES SECTOR: FROM CATCH TO CONSUMER

PART 3 OF A FIVE-PART SERIES

7th September, 2026

Exploring Opportunities Across the Fisheries Value Chain

Part 2 explored how fish enters the value chain through responsible capture fisheries and aquaculture, highlighting business and career opportunities for young professionals in sustainable fishing, fish farming, farm management, fisheries monitoring and digital production services.

In this 3rd Segment, we
discuss the Handling,
Processing and Packaging
Phase

3

Handling, Processing and Packaging – From Fresh Catch to Marketable Product

Fish is highly perishable. It begins to lose quality soon after harvesting. Prompt and hygienic handling such as sorting, cleaning and grading, help maintain safety and quality. Processing extends shelf life and converts fish into products suited to different consumers and markets. Packaging protects these products from contamination and physical damage, while providing useful consumption information and traceability details.

Business Opportunities

- | | |
|----------------------------------|---------------------------------|
| Fish handling and grading | Ice production and supply |
| Cold storage services | Improved fish smoking |
| Drying and salting | Fresh and frozen processing |
| Canning and convenience products | Packaging production and design |
| Food-safety and quality services | Branding and traceability |

Carrer Pathways

- ☐ Processing entrepreneur
- ☐ Food technologist
- ☐ Quality-assurance officer
- ☐ Food-safety inspector
- ☐ Cold-room operator
- ☐ Refrigeration technician
- ☐ Packaging technologist
- ☐ Product developer
- ☐ Laboratory technician
- ☐ Traceability officer
- ☐ Hygiene supervisor
- ☐ Equipment technician
