

THE FISHERIES SECTOR: FROM CATCH TO CONSUMER

PART 5 OF A FIVE-PART SERIES

21st September, 2026

Exploring Opportunities Across the Fisheries Value Chain

RECAP Part 4 covered how efficient transport, distribution and marketing of fish creates business & career opportunities in the fisheries value chain.

In this final part, we explore how responsible consumption and safe recovery of fish by-products can improve nutrition, reduce waste and create business and career opportunities.

5

Consumption, Waste Recovery And Circular Opportunities

The fisheries value chain does not end at the table. To ensure minimal waste, a circular fisheries value chain model is advisable. Fish offal and hard parts can be processed into fish meal, fish oil, organic fertilizer, leather, collagen, and gelatin after standard procedures are followed. Investment in sustainable innovation, research and development ensures sustainable incomes and jobs while safeguarding the environment.

A Circular Approach - From Consumption To New Value

Business Opportunities

- | | |
|--|---------------------------------------|
| Fishmeal and feed production | Fish oil extraction |
| Organic fertilizer and composting | Fish-skin leather and crafts |
| Collagen and gelatin products | By-product collection services |
| Waste sorting and safe disposal | Sustainable food services |
| Consumer information services | Circular-product innovation |

Career Pathways

- Food scientist or technologist
- Nutritionist
- Fisheries by-product entrepreneur
- Circular-economy specialist
- Waste-management officer
- Environmental health officer
- Quality-assurance officer
- Feed-production technician
- Product-development specialist
- Laboratory technician
- Consumer-awareness officer
- Sustainability researcher
